VARIABLE AREA PARTICLE SIZE ANALYZER

185 Plumpton Ave. Washington, Pa 15301 Phone: 724-794-3300 Fax: 724-794 3400 Email: greenbankenergy@aol.com Web Page: www.greenbankenergy.com

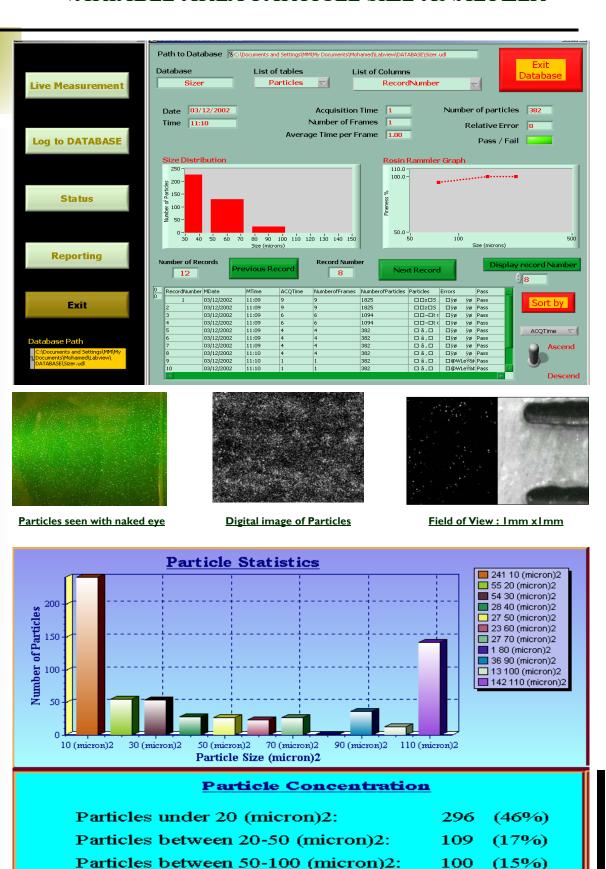

On-line Particle Size Analyzer.

The principal of our on-line Particle Size Analyzer is novel compared to the instrumentation presently available. Using the latest Laser performances and the high-tech sensors, our particle size analyzer measures, tracks and analyses the particulate phase on-line and in real time. The On-line Particle Size Analyzer is controlled by highly sophisticated software that measures particles down to few micrometers in diameter. The device is robust, user friendly and can be remotely accessed and controlled. In the hostile environment of coal power plants it allows the characterization in real time of the mill outlet as well as burner feed. This information is then used to control the performance of the boiler and to regulate the emission levels from the furnace.
